

8 OZ. POPCORN MACHINE

FEATURES:

- Harley-Davidson® logos and colors
- Built-in warming deck
- 1250 watt thermostatically controlled, hard-coat anodized aluminum kettle
- Old maid drawer

Harley-Davidson
8-oz popper with cart

Harley-Davidson 8-oz popper

Plenty of chrome, stainless steel and Harley-Davidson logos emblaze this 8 ounce popcorn machine. The etched stainless steel "Bar & Shield" and the traditional orange, black and chrome scheme make it ideal for the gameroom, office or bar of the Harley-Davidson enthusiast.

Although its design is as much art as it is function, the popper is built to last. A hard-coat anodized aluminum kettle, stainless steel food-zone, and tempered glass cabinet ensure this top-quality popper is easy to operate, clean and maintain. Available as a counter-top model or with the matching spoke-wheeled cart.

Paragon

FEATURES

High-Output, Hard-Coat Anodized Aluminum Kettle

The two most important factors in a popcorn kettle are performance and ease in cleaning. All Paragon poppers feature a high-output, hard-coat anodized aluminum kettle. Paragon's kettles are made of aluminum because it has the highest heat transfer rate of any approved cooking material, for optimum performance. These high-output kettles are then hard-coat anodized to provide a nonstick surface for easy cleaning.

Side-Hinged Kettle

Side-hinged kettles provide easy access to the inside of the kettle, thereby allowing for simple and convenient routine cleaning. This routine procedure prevents the difficult-to-clean "baked-on carbon" that is prevalent in oil-based cooking appliances. With ordinary popcorn poppers, time-consuming and difficult disassembly of the kettle is required for cleaning.

Stainless Steel Foodzone and Tempered Glass Panels

The bottom tray, drop door, and old-maid drawer of the popper are constructed of stainless steel and are removable for easy cleaning, in the dishwasher or in the sink with any mild detergent. The side and back panels are made of tempered glass for safety and ease in cleaning with standard household glass cleaners.

Built-In Warming Deck

The popper incorporates a 50-watt heating element underneath the bottom tray. Since heat rises, bottom heating is preferable over heat lamps that only heat the top layer of popcorn. This bottom heating element provides the optimum amount of heat to keep your popped corn continually warmed to the ideal serving temperature. Depending on the humidity level, popped corn can stay fresh all day if kept at the proper temperature.

Old Maid Drawer

Conveniently built into the base of the popper is a stainless steel drawer to collect the unpopped kernels (commonly called "old maids"). The small holes in the bottom tray are just the right size to allow the old maids to fall through while keeping the fully popped corn in the serving cabinet. The drawer is easily removed for emptying and cleaning.

Presentation Lamp

The inside of the cabinet is illuminated by a 50-watt R20 lamp. This miniature flood lamp is ideal for highlighting the popped corn for added impulse sales. The lamp also provides light for added safety and convenience for the machine's operator.
